The Ukraine has expressed its readiness to contribute to the European Green Deal initiative launched by the European Commission in 2019. This creates a unique opportunity to develop and apply a framework for monitoring progress towards green growth, using green growth indicators (GGIs).

The Ukraine and the EU-funded EU4Environment Programme joined forces to develop a national report based on the OECD set of GGIs that will enable evaluation of progress towards greening the economy, promote policy debates on green growth and comparisons among the EaP countries and the EU/OECD members. This work will build on a pilot [monitoring report](#) for Ukraine that was produced in 2016.

The meeting will launch this new work by discussing:

- benefits of applying the GGIs framework;
- existing and proposed set of GGIs for Ukraine;
- availability of data for Ukraine needed to apply each GGI; and,
- any identified substitutes for GGIs.

The meeting will gather the representatives of the Ministry of Environmental Protection and Natural Resources and Ministry for Development of Economy, Trade and Agriculture (including EU4Environment National Focal Points), the State Statistics Service of Ukraine, representatives of the civil society and relevant national stakeholders. The representatives of the European Commission, EU Delegation in Ukraine, and the EU4Environment Implementing Partners (OECD, UNECE, UNEP, UNIDO and World Bank) may also join the meeting.

---

The conference is organized with financial support of the European Union within the “European Union for Environment” (EU4Environment) Project.
